

Lecture 2

- AY Reminder : Start twitch.tv stream

Announcements

- Retro Studios (of Nintendo) suffered a major leak over the summer. One of their canceled projects was a character-heavy 3D platformer (“mascot platformer”) with some strong early 2000s platformer era vibes (it is apparently meant to be more of a “musical RPG”, though these elements don’t really show in the footage we have).
 - [Recording](#) (mirrored from [this reddit post](#)).
- One of Austin’s friends, Brent Lattery, [made the retro models](#) for the Sonic 3 film’s [credits sequence](#).
 - [Sonic model](#) (apparently a rig / remake of Sonic’s first-ever 3D model from [Sonic the Fighters](#)).
 - [Sonic and Shadow face off](#) (Shadow did not have a model in Sonic the Fighters, so Brent made it from scratch attempting to match the style of that game).
 - [Ivo and Gerald Robotnik dance](#) ([scene 2](#))
- (extra credit) [IGDA this Thursday \(tomorrow\)](#)
- There is no lecture Monday, but homework1 is still due (and homework2 will still launch) at 1:30pm.

Workshop : Blender Demonstration (15 min)

- Please don’t attempt to follow along on your laptop– just enjoy, and revisit the lecture recording if needed.
- I planned to do this yesterday, but ran out of time. The first time one runs a course, it is very difficult to gauge just how long certain things will take (I go on tangents a lot, which doesn’t help :P).
- [Downloadable .blend file / starting point](#)
- [Customize a block M for funsies](#) / to demonstrate upcoming techniques and features.
