Announcements

- [Using Blender \(3D Software!\) to create high-quality, retro 2D art.](#)
 - A good example of what becomes possible when you understand your technology deeply.
- Animation-Research Youtube channel : [New Frame Plus](#)
- [Resident Evil animations in real life.](#)
- [Footage](#) of [Sarah Ovresat's retargeting](#) of a humanoid Mixamo walking animation onto a dinosaur's rig.
- Assignments Due
 - [5. Animation](#)
 - **Question** : Austin, why did you make us do the same problem three times in a row to end the homework? (Animate a character in victory, defeat, and attacking actions)?
 - 1) Because I mis-balanced the homework slightly, and probably should not have had you do it three times in a row (just twice may have been fine).
 - 2) The Action Editor and NLA are crazy, and require repetition, repetition, repetition to get comfortable with and memorize. There are too many small things that can get you, and the mental model of creating multiple actions across multiple objects requires time and experimentation to fully understand.
- Assignments Released
 - [6. Animation II](#)
 - **Note** : Mainly a second round of exercise with Actions, the NLA, and a couple new topics (dynamic hair / wiggle bone, Mixamo, etc). The last problem provides complete freedom to create any cutscene of your liking (so long as you use an original character).
 - **Note** : You won't find too many questions related to the 12 principles of animation on this homework– you will be expected to employ them passively when the opportunity arises.

The 12 Principles of Animation (by Evan Marcus)
