Announcements

- New Components are being added to the 3D Platforming Testbed in anticipation of the features your stories and games will need.
 - Example ideas.txt : "I want to make a game set in space" => [Introduction of an InteractionSetGravity component.](#)
 - Example ideas.txt : "I want to make a game in which you cooperate / work with characters to solve a problem" => [Introduction of an InteractionFollowGameobject component.](#)
 - Example ideas.txt : "I want to make a game that has a dramatic escape sequence at the end." => [Introduction of InteractionStartTimer and InteractionStopTimer components.](#)
 - **The relationship between an artist / game designer (you) and their engineering team (me) is one of the most important in all of modern media. If you can accurately express what technology you'll need for a given game or story, and how that technology should work, you have a much better chance of receiving it. On the flipside, if engineers (me) can anticipate what their artists / game designers (you) will need, useful tools and technology may be created in advance to give content production a fast, running start.**
 - Wolverine Soft Studio has some interesting stories where this worked well, and interesting stories where they weren't able to settle on a creative direction, meaning tools and technology arrived late, which means the art, game design, and content suffered.
 - Another good example– Final Fantasy 13 (see below).

Demonstration : Creating a 3D Platforming Character

- Creating necessary actions
 - Idle
 - JumpUp
 - JumpDown
 - Walk
 - KO

- Importing the Actions into Unity
 - Looping vs not-looping?
- The Animator Component and Animation Controller

Daily 20-minute Model (30 min)

- 20 minutes for production
- 10 minutes for upload to sketchfab
- Post in discord server and [in this form](#)
